

JULIAN SHAW

Founder-Engineer | Full-Stack Product Engineer | AI Agents & LLM Tooling | PropTech & Compliance SaaS

London (Thornton Heath) | 07448 154768 | julianshaw2000@gmail.com | julianshaw2000.com | github.com/julianshaw2000

PROFILE

Founder-engineer who designs, builds and runs production SaaS products end to end — from customer-facing UI through APIs, data, billing, auth and AI agent tooling. As sole engineer and founder of Auditraks, I own architecture, product and delivery for a multi-tenant compliance platform, and have shipped two MCP servers exposing 55 AI tools that let LLM agents act on live product data. I have built property-management and rental systems (PropKat, Zeolite Technology), RAG-based document automation (Legal-JM) and real-time monitoring software, and I bring 20 years of engineering discipline from enterprise delivery at Saudi Aramco and GSK, including leading a development team. My latest build, Eternal Vaults, took a Next.js/React product on AWS from empty repo to a live staging deployment in five days. I am at my best early: ambiguous problems, high ownership, shipping fast and setting a technical bar others can build on.

CORE SKILLS

AI & Agents: LLM agent tooling via Model Context Protocol (TypeScript MCP servers, 72 tools shipped), RAG pipelines, Claude API & prompt engineering, agentic workflow automation (n8n), AI-assisted development (Claude Code, Cursor)

Frontend: TypeScript, React 19, Next.js 16 (App Router, server actions), Tailwind CSS v4, Angular 21, PWA builds, multilingual & RTL UI

Backend & Data: TypeScript/Node, Python, C# / .NET 9, PostgreSQL (Prisma, Aurora Serverless v2), Supabase, SQL Server, Firebase, REST APIs, queue-driven async processing, multi-tenant data isolation

Cloud & Delivery: AWS (Lambda, CloudFront, Aurora, S3, SQS, EventBridge, MediaConvert, Cognito, VPC, IAM) via SST v4 IaC, Azure, Vercel, Docker, GitHub Actions CI/CD, Vitest, Playwright + axe, Stripe, OAuth/OIDC (Cognito, Entra External ID)

Ways of Working: End-to-end product ownership, working directly with customers, technical roadmap, code review & mentoring, Agile/Scrum (CSM)

EXPERIENCE

Founder & CTO (sole engineer) — Auditraks Ltd — B2B compliance SaaS for 3TG mineral supply chains | Nov 2025 – Present

- Founded and single-handedly built a multi-tenant SaaS platform with Supplier, Buyer and Admin portals; own architecture, roadmap, delivery, and support.
- Shipped two MCP servers exposing 55 AI tools so LLM agents can run risk assessments, predict churn and answer natural-language questions over live compliance data.
- Built an EU Regulation 2017/821 compliance module and tamper-evident custody tracking (SHA-256 hash chain), turning regulatory requirements into working product features.
- Integrated Stripe subscriptions with webhook handling and Entra External ID auth; diagnosed and fixed a tenant-isolation bug in dependency-injection scoping; set up OIDC-based CI/CD.

Founder & Sole Engineer — Eternal Vaults (vaultessa.com) — digital memorial SaaS | Sep 2026 – Present

- Built a QR/NFC-linked digital memorial platform end to end in TypeScript, Next.js 16 (App Router) and React 19, from empty repo to a live AWS staging deployment in 5 days (30 commits), with PostgreSQL on Prisma and Cognito auth plus a signed session layer.
- Defined the whole AWS stack as code with SST v4: Next.js on Lambda + CloudFront, Aurora Serverless v2 scaling to zero, private S3 with presigned uploads, and an async media pipeline (SQS → MediaConvert → EventBridge → Lambda).
- Set up GitHub Actions CI running Vitest against a real Postgres container and Playwright + axe accessibility tests, with auto-deploy to staging and an approval gate plus health check before production.
- Shipped GDPR self-service (data export, erasure), role-based permissions and a staff audit log; designed the LLM layer (Bedrock, pgvector RAG with access filtering before retrieval) and recorded the decisions in ADRs.

Founder / Lead Engineer — PropKat — UK property & maintenance management SaaS | Nov 2025 – Jan 2026

- Architected and built a multi-tenant property and maintenance management platform for UK landlords and agents, with PostgreSQL and Stripe subscription lifecycle management.

Builder — VidPro MCP Server | Independent project

- Built a 17-tool MCP server in TypeScript on Supabase, giving AI agents structured access to a video production workflow.

Founder / Lead Engineer — Legal-JM — AI legal document review | Jan 2025 – Aug 2025

- Designed document ingestion and proofreading workflows; engineered Claude prompts for structured legal text analysis and RAG-based document automation.

Developer — JC Services — London garden clearance business | 2026

- Delivered a full visual and technical redesign as a Next.js site deployed on Vercel.

Lead Engineer — Arab Africa Global Business Summit (arabafribagbse.com) | 2026

- Built an event and registration platform designed to scale to 20,000+ users, with tiered registration, Stripe payments, admin dashboards and a trilingual (English / Arabic / French) RTL-aware UI.

Developer — Carib Condominiums — gate & security system | Aug 2024 – Present

- Built real-time gate monitoring, visitor logging and camera integrations using Python, Firebase and Home Assistant automation.

Founder / Lead Engineer — CityHistoryWalks (cityhistorywalks.com) | Jul 2024 – Present

- Shipped a location-aware walking-tour PWA with MapLibre, Supabase and Stripe-gated premium content.

Lead Developer — Zeolite Technology | 2018 – 2021

- Built property rental management systems, Python trading bots and automation tooling for enterprise clients.

Application Engineer / Control Systems Estimate Engineer — Saudi Aramco, Dhahran | 2008 – 2018

- Delivered and evolved enterprise systems for 25,000+ users (ASP.NET MVC, SQL Server), including the Project Safety Management System, working directly with operational stakeholders.

Senior / Lead Programmer — Micros Fidelio, Slough | Dec 2007 – Aug 2008

- Led a 6-person development team, setting technical direction and mentoring while delivering web portals and web services for hospitality systems.

EARLIER EXPERIENCE

System Analyst / Software Developer — Autodata, Maidenhead | Mar 2006 – Dec 2007

Site Automation Engineer — GlaxoSmithKline, Worthing | Jan 2003 – Mar 2006

Project Engineer — Honeywell Control Systems, Bracknell | Sep 2002 – Dec 2002

Lead Engineer, DCS — ABB/LALCO, Saudi Arabia | Dec 2000 – Aug 2001

Project Engineer — Honeywell Turki Arabia Ltd, Saudi Arabia | Nov 1998 – Dec 2000

EDUCATION & CERTIFICATIONS

MSc Information Technology — University of Liverpool | BSc Computer Science — University of Massachusetts, USA

IBM Generative AI (2023) · Certified Scrum Master · Agile Expert Certified · ISO 9001 Quality Management
